

Name: _____

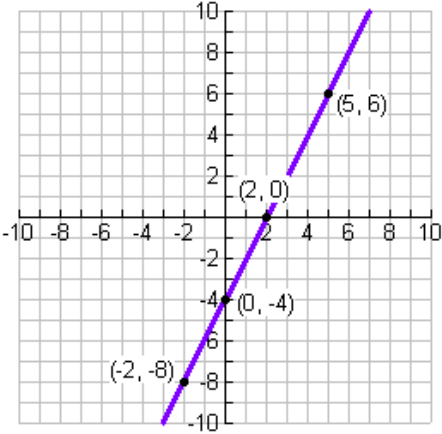

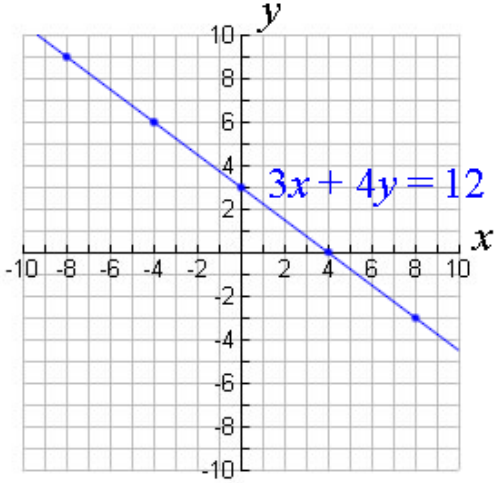

Lesson 6.2 – Slope Review

Definition of Slope =

Formula:

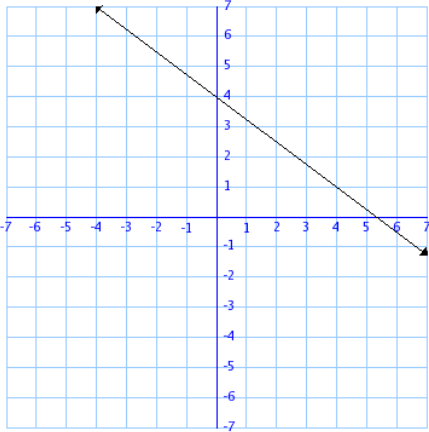

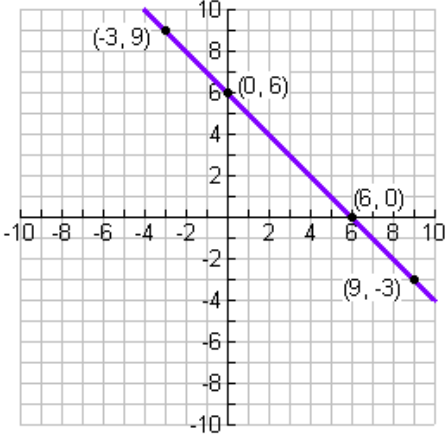

Slope = Positive	Slope = Negative	Slope = 0	Slope = undefined

Examples:

	
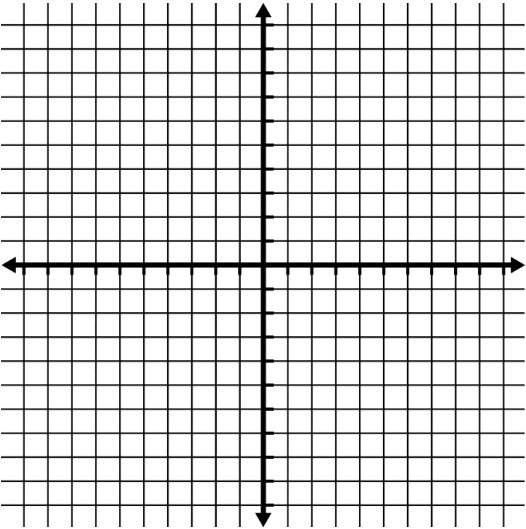

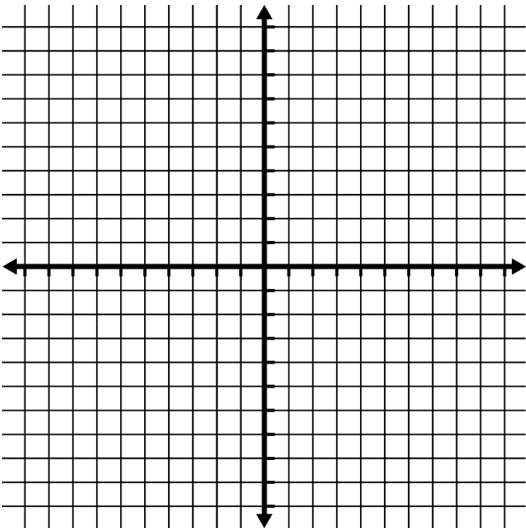

Graph that goes through (-2,5) and (3,-1)	Graph that goes through (2,-4) and (2,7)

Assignment:

Find the Slope:

	
<p>Graph that goes through (-2,-3) and (3,7)</p>	<p>Graph that goes through (5,-2) and (-1,-2)</p>

Draw a line through the origin with a slope of...

<p>$m = \frac{3}{4}$</p> 	<p>$m = -3$</p> 
---	---

Slope-Intercept Form

$$y = mx + b$$

m = slope

b = y-intercept

Example:

Linear Equation:	Slope	Y-Intercept
$y = \frac{2}{3}x + 2$		
$y = -x - 5$		

Assignment:

Linear Equation:	Slope	Y-Intercept
$y = 2x - 5$		
$y = x + 2$		
$y = -\frac{1}{2}x + 3$		
$y = \frac{4}{3}x$		
$y = 7$		
$x = -2$		
$y + 2 = 2x - 5$		
$2y = 2x - 5$		

Graphing Method #2 – Using Slope

STEP #1: Plot the _____

STEP #2: Use the _____ to plot a second point

STEP #3: Draw a line through the points

Examples

a) $y = 2x + 1$

b) $y = -\frac{1}{3}x - 3$

Assignment:**Graph each equation using the slope method. Show your work.**

1) $y = \frac{4}{3}x + 3$

2) $y + 3 = 4x$

3) $y = -x + 6$

4) $y = -\frac{3}{2}x$

5) $y = -4$

6) $x + y = 3 + y$

Practice Quiz:

1) Find the slope

a)

b)

A linear graph that goes through the points (-3,1) and (3,4)

2) Analyze the equation

Linear Equation:	Slope	Y-Intercept
$y = -2x - 5$		

3) Graph the following equation using the slope method. Show your work.

$$y = -\frac{2}{3}x + 4$$

Name: teacher

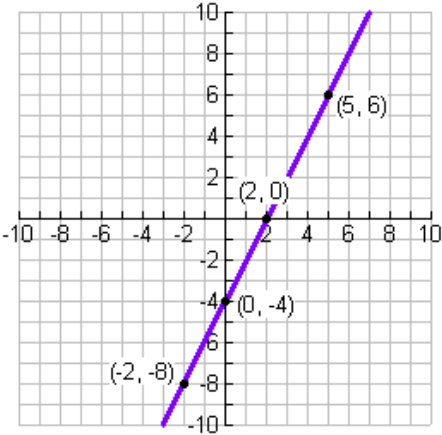

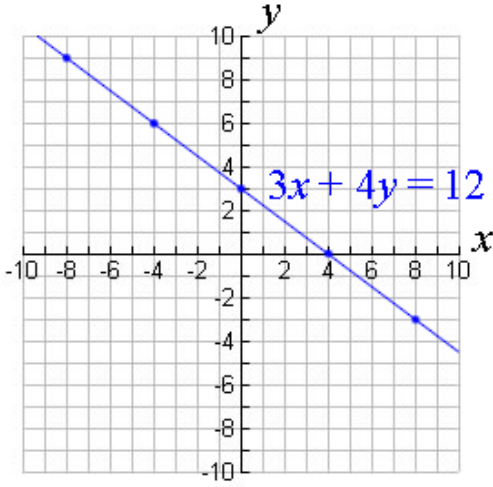

Lesson 6.2 – Slope Review

Definition of Slope: steepness of a line,

calculated using $\frac{\text{rise}}{\text{run}}$ or $\frac{\text{change in } y\text{-value}}{\text{change in } x\text{-value}}$ or $\frac{y_2 - y_1}{x_2 - x_1}$

Slope = Positive	Slope = Negative	Slope = 0	Slope = undefined
------------------	------------------	-----------	-------------------

Examples:

	
Graph that goes through (-2,5) and (3,-1)	Graph that goes through (2,-4) and (2,7)

Graphing Method #2 – Using Slope

STEP #1: Plot the y-intercept

STEP #2: Use the slope to plot a second point

STEP #3: Draw a line through the points

Examples

a) $y = 2x + 1$

b) $y = -\frac{1}{3}x - 3$
